Does Your Routing System Do All of This?

1. Next-Generation Route Optimization

☐ My routing system allows me to go beyond stop sequencing and uses all route-related factors (bell schedules, tiering, transfer stops, transportation policies, etc.).

2. Real-Time Intelligence

☐ I can immediately access live data for routes as they run so I can ensure informed decisions and timely, accurate parent communication.

3. Stop-Time Accuracy

☐ I can easily determine and change stop times as appropriate. This includes using live data from GPS/tablets to update stop information based on time and ridership.

4. Free Map Updates

☐ My routing system gives me complimentary map updates when needed, with the ability for staff to make temporary adjustments.

5. Sandboxing

☐ My routing system enables me to simulate an unlimited number of routing scenarios without impacting live/default routes, with the ability to publish approved routes to replace live routes with just a few clicks.

6. End-to-End Platform

☐ My routing system has a comprehensive range of capabilities, including a Parent App and tablet-based student ridership tracking and turn-by-turn navigation.

7. Complex Student Routing

☐ I can easily accommodate alternating student schedules, including different pick-up and drop-off locations, attending schools on alternate days, and attending classes at different locations during the week.

8. On-the-Fly Route Changes

☐ I can modify live routes on the fly due to an unexpected challenge (driver call-out, equipment failure, etc.) and communication the changes in real-time to drivers, without impacting default routes.

9. Intuitive Design

☐ My routing system has a highly visual, map-focused design, intuitive navigation, and a minimal number of clicks required so that I can quickly and easily access information.

10. Targeted Communications

☐ I can send targeted, pin-point accurate correspondence via email or text to the parents and schools staff impacted regarding bus delays or route changes.

11. Unlimited Users at No Charge

☐ My routing system has no restrictions on the number of users it can host in my district.

12. Advanced User Access Controls

☐ My routing system has highly configurable user roles to ensure staff across the district only have access to what they need.
